## **Pull Up Station Pro**

**KOMPAN**  
Let's play

The pull up bar is the most fundamental calisthenics and street workout equipment. In this Pull Up Station, it is combined with a Swedish ladder.

This Pro-version has an 150 cm wide pull up bar with plenty of space to do typewriter pull ups, and the dimension of the pull up bar is optimized to 32 mm for improved grip.

The Swedish ladder can be used as a wall, to influence difficulty levels of various exercises such as hand stand push-ups, Bulgarian split squats and push ups.

Additionally, the Swedish ladder is perfect for stretching and offers a step up for reaching the pull up bar. The clean space under the pull up bar makes it suitable for advanced exercises such as muscle ups.
